Mandar Kore

(Software Developer)

Experience

4 years of experience in developing web based application in Java, J2EE web technologies. Good knowledge of object oriented programming concepts and several design patterns.

Skills

Front End Skills: React, React native, Angular

Back End Skills: Java, adv. java, spring boot

Database Skills: PostgreSQL, MySQL, Cassandra

Frameworks: Spring Boot, Spring-Core, Spring-MVC, Spring Security, Hibernate.

Education

Padmabhushan Vasantraodada Patil Institute of Technology, Sangli (MH).

Bachelor of Engineering, Information Technology

Relevant Project Experience

1. Project Title: Chef Recruitment Portal Development

Client: A restaurant chain in Pune

Duration: 5 Months

Technological Stack: Angular, Html, CSS, Typescript, C#, AWS EC2, SQL Server

Abstract: This portal has been developed for recruiting chefs by different restaurants. The chefs can SignUp, Login and search for jobs based on their cuisine expertise. On the other hand, the restaurant owner can signup, SignIn and search for chefs having expertise in different cuisines. They can post their requirements and then contact individual chefs. Searching of requirements, sorting and notifications is covered on the frontend functionality.

_____

2. Project Title: Usherpa

Client: Colorado - US based customer

Duration: 6 Months

Technological Stack: React Native

Abstract: Usherpa is a React Native based user-friendly mobile application used to track all tasks, birthdays, loans and email analytics during a month for a field officer - typically a mortgage and real estate professional. The application is extremely helpful for field officers requiring personalized customer engagement. It has capabilities to track, analyse and provide insight about the data through visualization. The central office can send push notifications to the officers – either a personalised notification or bulk notifications using the app's push notification feature. A user can also switch between their sub-accounts during the course of their field visits.

_____

3. Project Title: CEM -Customer Experience Management

Client: An Indian IT service provider

Duration: 5 months

Technological Stack: Angular 9, C#, SQL Server

Abstract: This application is used by the companies that develop integrated Packaging Solutions. This Platform helps users to harness manufacturing engineering knowledge and facilitate a rapid transition to a digitized organization empowered to make intelligent decisions. It manages customer experience from Query to quote generation, quotation progress tracking and provides intuitive Analytics of win/loss of quotations. Competitor's machine information Intelligence is used for market surveying and observations. The System also maintains the data library for Product Information, Field Performance, Product Specs. It also keeps historical information about proposals and maintains a detailed Customer Book and tracks individuals among customers.

_____

4. Project Title: Rescue316

Client: A US based customer

Duration: 6 Months

Technological Stack: React Native, J2EE/Spring Boot, MySQL

Abstract: Rescue316 is a React Native, cross platform (Android+iOS) based mobile application that is aimed for anonymously reporting of bullying incidences and suicidal thoughts. This application has been developed for a US based customer. The user initially has to register themselves with all the information, including their parents and their school authorities. After the registration, the app offers 3 capabilities – SOS call, reporting of bullying incidents and reporting of suicidal thoughts. The user can attach images and videos as evidence of bullying. Once any report is submitted, an email is triggered to various authorities, parents as well as school stakeholders. In addition, on the server side, the admin can analyze the reports and take appropriate action.
